Features

1. Token Launch on Solana

Seamlessly launch SPL tokens on platforms such as Pumpfun, Jupsol directly from the Cleo terminal with a user-friendly interface and robust backend powered by Cleo AI terminal on the go.

2. Trade Tokens

Engage in real-time trading of Solana-based tokens within the terminal.

- Intuitive trading tools.
- Direct integration with decentralized exchanges (DEXes) for liquidity and speed like Meteora, Raydium and Orca.

3. Token Balance Insights

Check your wallet balances effortlessly for all Solana-native assets.

- Multi-wallet support.
- Detailed breakdown of token holdings.

4. **AI-Powered Integration**

Advanced AI functionalities via OpenAI and Langchain. empower users with seamless functions for analyzing markets, strategize token launches, and optimize trades with precise insights.

5. **AMM Pool Deployment**

Deploy and manage Automated Market Maker (AMM) pools on top Solana DEXes.

- Create liquidity pools to support token trading.
- Tools for monitoring and rebalancing liquidity.
- Cleo Terminal will support Orca, Raydium and Meteora pool deployment.

6. **Community Airdrops**

Simplify token distribution for community engagement.

- Create and execute airdrops effortlessly.
- Support for multiple wallet address lists.

7. **NFT Minting**

Mint and manage Solana NFTs on platforms like metaplex directly from the terminal.

- Batch and single NFT minting support.
- Easy integration with Metaplex standards.

Platform Vision

The Cleo Ai Agent Terminal aspires to be the "Telegram for Solana", creating a collaborative, AI-enhanced environment where users can:

- Network with communities.
- Share insights and data seamlessly.
- Engage with Solana-based decentralized applications (dApps) and tools under one roof.

By leveraging Sendai solanaAgentKit, Cleo Ai terminal combines blockchain utility with advanced AI, driving mass adoption and utility for degens and blockchain enthusiasts alike.
